Abstract of JP 2002202989 (A)

PROBLEM TO BE SOLVED: To allow a user to be able to easily and rapidly retrieve target information through a communication network. **SOLUTION:** Information and retrieval information corresponding to the information are stored in a storage means so that users can instruct for the information. By this, the user can easily acquire a desired information from an information retrieval server through the network. Namely, the specified information stored in the storage means is displayed on a display means, and the users can instruct the information by an instruction means. First, the retrieval information corresponding to the information is read out by the instruction means, the retrieval information corresponding to the information is read from the storage means; Then, the read retrieval information is sent to the information retrieval server to acquire the specified information according to the retrieval information from the information retrieval server. Thus, by merely instructing for the information read from the storage means and displayed on the display means, the information desired by the users can be acquired from the information retrieval server.
